1. Game Overview

LAST SECOND is a 3D single-player exploration/puzzle game where time, objects and opportunities constantly disappear. The player enters a mysterious space with five doors and must complete any three of five short levels. Each level combines exploration, a simple puzzle, a required object and temporary bonus-time items.

2. Core Gameplay

The game begins with a main menu containing PLAY, SETTINGS and QUIT. If the player does not interact for 30 seconds, the game exits. PLAY leads to a 15–20 second rules/briefing screen, followed by a black hub containing five white doors.

Level loop: Choose door → 60-second timer starts → Explore → Find required object → Use temporary bonuses if needed → Unlock exit → Complete level.

3. Comic • Twist • Light

Theme	Game Implementation
COMIC	Playful animations, absurd objects, humorous interactions and funny feedback when temporary opportunities disappear.
TWIST	The five doors appear to be separate challenges, but recurring clues reveal a connection. Completing three levels leads to a final reveal that changes the meaning of the journey.
LIGHT	Minimal, clean visuals; approachable puzzles; playful sound/feedback; no horror-focused presentation.

4. Temporary Mechanics

Every level has a 60-second base timer and approximately 2–3 temporary objects. These objects provide additional time (+5s, +10s or +20s) but disappear after a short configurable lifetime. This creates a decision: spend time searching for extra time or continue toward the exit.

TIME IS TEMPORARY • OBJECTS ARE TEMPORARY • OPPORTUNITIES ARE TEMPORARY

5. Five Levels / Team Ownership

Level	Owner	Deliverable
1	Bhavya	Map + puzzle + temporary objects + exit
2	Shivansh	Map + puzzle + temporary objects + exit
3	Anwar	Map + puzzle + temporary objects + exit
4	Samarth	Map + puzzle + temporary objects + exit
5	Anany Sharma	Map + puzzle + temporary objects + exit

Each member designs one independent level concept and map while following the shared 60-second, temporary-object and exit framework.

LAST SECOND — DEVELOPMENT PROPOSAL

6. Level Structure

- Each level is a compact 3D map with obstacles, interactive objects and one primary objective.
- The player must find a required key/object or solve the level's main puzzle.
- The final gate/exit becomes available only when the required condition is satisfied.
- Temporary bonus objects can extend the timer, but only if collected before they vanish.
- Failure occurs when the timer reaches zero before the level is completed.
- Three successfully completed levels are required to reach the ending.

7. Twist & Ending

The five levels contain small recurring visual or environmental clues. These clues gradually suggest that the doors are connected. After the player completes three levels, a short ending reveals the larger purpose behind the temporary challenges and recontextualizes the experience.

“You made it. But nothing lasts forever.”

8. Unity Technical Scope

System	Purpose
GameManager	Global game state and progression
MainMenuManager	Menu + 30-second inactivity timer
TimerManager	60-second timer + bonus time
LevelManager	Load levels + completion tracking
DoorManager	Five-door level selection
TemporaryObjectManager	Object lifetime + disappearance + bonus
Objective / Exit Manager	Required object, exit and completion logic
UI / Player Systems	HUD, interaction and 3D movement

9. Development Plan

1. Finalize five level concepts and rough map layouts.
2. Build the shared Unity systems for movement, timer, doors, objectives, temporary objects and transitions.
3. Prototype each member's level independently.
4. Integrate all five levels and add the comic/light presentation.
5. Implement the connected clues, twist and ending.
6. Playtest and balance each level around the 60-second limit.
7. Publish the project to a public GitHub repository with proposal.pdf in the root.

10. Submission Scope

The final submission will be a playable Unity game demonstrating all three required themes through gameplay and presentation. The public GitHub repository will contain the project and the required two-page proposal.pdf. Every team member's name, email and IndieConnect ID will be included in the proposal.

11. One-Line Pitch

“A light-hearted 3D puzzle game where everything you need disappears before you can use it — and the biggest surprise is why.”
